Baby & Personal Hygiene Products

"Freshness at Your Fingertips."

WET WIPES

Wet wipe, also known as a wet towel or a moist towelette or a baby wipe in specific circumstances, is a small moistened piece of cloth that often comes folded and individually wrapped for convenience. Wet wipes are used for cleaning purposes like Personal hygiene, Pet hygiene, and Household cleaning.

Wipes market mainly comprises of two segments such as Personal care wipes that include Baby wipes, Facial wipes, Cosmetic wipes, Hand sanitizing wipes, Feminine wipes, Intimate wipes, etc., and Household cleaning wipes that include Kitchen wipes, Glass cleaning wipes, Surface cleaning wipes, Bathroom wipes, Food service wipes, and Automotive care wipes. 90% of wet wipes on the market are produced from nonwoven fabrics made of polyester or polypropylene.

The material is moistened with water or other liquids (e.g., isopropyl alcohol) depending on the applications. The material may be treated with softeners, lotions, or perfume to adjust the tactile and olfactory properties. Preservatives such as methylisothiazolinone are used to prevent bacterial or fungal growth in the package. The finished wet wipes are folded and put in pocket-size package or a box dispenser.
